

# Air Flow Comparison

## Natural Fiber Filter

Unique high air flow design allows the heating and cooling energy to treat your air, rather than restrict air flow - this results in efficient use of your energy dollars, and **SAVES YOU MONEY.**

## Ordinary Disposable Filter

Ordinary pleated, polyester, fiberglass and electrostatic treated filters quickly become blocked and yield poor air flow through the heating and cooling zone. This **WASTES ENERGY** that should be treating your air, and **WASTES YOUR MONEY.**
